**What do you know about  
Lyme? How does it impact  
your clients? How can you  
recognize it?**

**How can you help?**

***This information will forever  
change how you practice!***

***A training for mental health  
professionals***

According to the CDC over 300,000 people each year, the majority in New England, contract Lyme disease, just one of a dozen possible illnesses spread by ticks. Lyme itself can mimic a wide variety of mental health conditions ranging from bipolar, to panic disorder, to major depression, even dementia.

This training will enhance your practice abilities by increasing your awareness of the prevalence and signs of disease, including methods for supporting clients and their families through the difficult phases of treatment, symptom management, and self advocacy.
